

PRESSURE SENSITIVE LAMINATES

The Hot Press range of pressure-sensitive laminates is designed for use with the JetMounter™ and other quality roller laminators. The films provide superior protection from mechanical abrasion, moisture and pollutants. All contain UV stabilisers and absorbers to inhibit fading and discolouration from sunlight. Both decorative and plain finishes are available.

MATT 75µ

This film is characterised by a full matt finish that completely eliminates reflections. It offers additional UV protection when used behind glass, yet is almost invisible. Matt film is most often used where lighting is unpredictable and uncontrollable, such as exhibition halls and other public areas.

SATIN MATT 50µ

This film is often used to laminate posters and prints, as its subtle finish closely mimics that of the printed piece. The satin sheen finish reduces glare, but does not reduce contrast, as the film is relatively thin.

STANDARD GLOSS 40µ

A polypropylene film with a gloss finish that is both strong, yet economical. It can be used to impart a gloss finish to any flat artwork, regardless of its original finish.

ULTRA GLOSS 50µ

This ultra gloss polyester laminate offers a finish similar to Cibachrome prints. With the highest degree of gloss available, it delivers an almost mirror-like finish. This film is preferred where impact and vibrant colours are the key elements of the artwork. For best results, it should be used only with ultra smooth boards.

SPARKLE 50µ

A specialty polyester film with a digitized pixelated effect. It's holographic nature is designed to create an impact and is therefore ideal for point of sale applications.

SAND TEXTURE 90µ

This glare-resistant film is ideal for graphics that will be subjected to prolonged exposure in public places and exhibit halls. It displays a pleasing sandy texture that is also scuff resistant. When used in conjunction with the right adhesives, it can be used to create durable floor graphics.

ICE 80µ

This film has the same scuff-resistant properties as Sand Texture, but with a heavier, crystal-like finish, that resembles crushed ice.

FINE LINEN 90µ

This delicate, fabric-textured laminate is specified by photographers wishing to impart a subtle-yet-decorative finish to their work. It is also useful for disguising minor creases and cracks in prints and posters.

COARSE LINEN 90µ

This film displays a mid-gauge fabric texture resembling rough cotton. It is commonly used on larger format artwork where a finer finish may be lost. The rougher gauge of this film is capable of hiding large imperfections in prints and posters.

HESSIAN 80µ

A heavy-texture film, resembling hessian or canvas. The rough, embossed surface of this film is capable of hiding quite large imperfections in prints and posters.

CRUSH LEATHER 90µ

A soft PVC film embossed with a crushed leather finish. This film offers an opulent look and is widely used by wedding and portrait photographers to enhance the quality and beauty of their work.

KID LEATHER 90µ

A soft PVC film embossed with a kid leather finish, Kid Leather offers an attractive, elegant finish that is reminiscent of fine Italian leather.

ANTIQUE LEATHER 80µ

A soft PVC film, embossed with an antique leather finish that imparts a luxurious look.

STEEL 80µ

This film imparts a unique brushed steel finish to your artwork and can be used with modern style frames to capture a contemporary lifestyle.
