

TOOLS OF THE TRADE

HOT PRESS

Hot Press offer a comprehensive range of finishing tools designed to make mounting and laminating easier and more efficient.

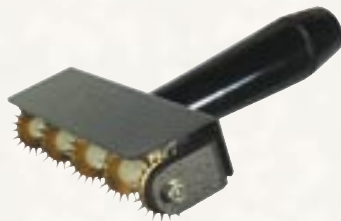

TACKING IRON

Used to tack Dry Mounting Tissue to the back of prints and then to a substrate. The small shoe iron is pre-set at a fixed temperature.

PIERCING TOOL

A metal roller with perforating spikes, used to create pin-sized holes in unpierced PVC films, allowing moisture and air to escape during the laminating process.

DUST REMOVAL SYSTEM ROLLER AND PADS

A great tool for any mounting or finishing room, the Dust Removal System (DRS) roller removes dust and dirt from prints, substrates or film without leaving a tacky residue. The roller is durable with a steel handle and can be cleaned easily by rolling over a special adhesive pad (sold separately).

OLFA KNIVES

Hot Press offers two different types of cutting knives: an ergonomically designed heavy duty cutting knife featuring rubber grip inserts, and a more economical standard utility knife. Both use replaceable snap-off blades.

ANTI-STATIC BRUSH

A special cleaning brush with conductive fibres, which gently whisk away harmful dust, lint and dirt and dissipate static. Used to clean prints prior to lamination. A Grounding cord is included.

CUTTING MATS

This cutting mat is a tri-layered, self-healing PVC (vinyl) mat designed to protect your work surface from blades or knives. Ideal for covering all of your worktables, this anti-slip, PVC (vinyl) surface self-heals scars and scratches and helps to keep cutting tools and perforators sharp.

THE BIG PURPLE RULER

A cutting edge safety ruler ideal for trimming. Its non skid pads prevent twisting and keep the trim straight and a safety guard prevents the cutting blade from riding up onto fingers and hands. The bright purple colour makes it easy to find.

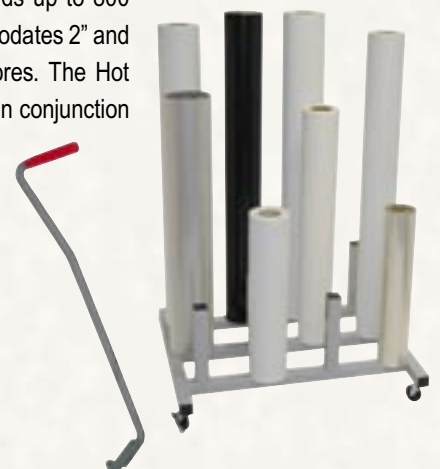

STRETCHER PLIERS

Metal jawed pliers used to clamp the canvas when applying it to stretcher bars.

MULE™ AND WHIP™

The Mule™ is a safe and convenient mobile storage cart, which can hold up to 12 rolls of Hot Press laminating films, mounting adhesives canvases and specialty media. It fits through standard commercial doors (36", 914 mm), holds up to 800 lbs. (363 kg) and accommodates 2" and 3" (51mm and 76mm) cores. The Hot Press Whip can be used in conjunction with the Mule™ to allow easy lifting of heavy rolls of laminate and media from either the Mule™ or the floor.

TACKING IRON

| Code | Product |
